

OCOM

» With the use of the RESTful Adapter for SAP Process Integration of the KaTe we were able to keep our architecture fully RESTful, supporting our company standard. «

Bjorn Tammer, Program Manager, OCOM

Starting point

SAP ERP and SAP NetWeaver Process Orchestration are implemented at OCOM's subsidiary company EvoSwitch. The SAP products are the central systems but in the system landscape there are multiple applications including a web-based Customer Portal. This Customer Portal needs to be able to consume and alter data from SAP using RESTful communication, as OCOM's architecture is based on REST APIs.

SAP NetWeaver Process Orchestration does not currently support REST APIs out of the box and therefore we contacted KaTe for their solution.

Implementation

The implementation of KaTe's RESTful Adapter began with a trial period to confirm that the RESTful adapter would fulfill the needs of the OCOM environment. The trial adapter was delivered, including documentation and support. Installation of the adapter itself was then done easily by importing the package into our SAP environment.

During the trial period OCOM developed two test interfaces to connect part of the Customer Portal to SAP using RESTful APIs connected to the KaTe adapter. Whenever needed, KaTe delivered support with the development of the first APIs and the proper setup of the adapter. The people at KaTe have proven to be very helpful and knowledgeable.

Company profile

OCOM is Europe's leading internet services company. OCOM and its subsidiaries LeaseWeb, EvoSwitch, FiberRing and DataXenter are part of the experience of millions of internet users around the world every day. Customers trust the OCOM companies to bring content to end users in a reliable fashion and provide sustainable internet services that enable individuals and businesses to establish, maintain, and evolve an online presence.

OCOM's companies fulfill this function by offering reliable, innovative and cost effective solutions for the global transmission of sound, images, data, transactions and entertainment. Currently the OCOM companies transport 5.0 Tbps across the internet, which makes them one of the premier internet hosting providers in the world.

E info@kate-group.com

The trial was concluded successfully and OCOM purchased the adapter for daily use. Currently multiple applications are connected to SAP using RESTful APIs provided by the KaTe RESTful adapter. In the future we will even extend the use of the adapter aiming to connect over 50 different applications to SAP.

Conclusion

» The KaTe RESTful Adapter for SAP Process Integration is solid and easily installed. So if you're looking to extend your SAP platform with a RESTful adapter, KaTe is the way to go. «
